PROFESSIONAL SUMMARY

IT support and cybersecurity professional with experience supporting more than 20 healthcare facilities and building hands-on network, systems, and security projects. Skilled in end-user support, Active Directory, Windows and Linux administration, TCP/IP troubleshooting, pfSense, VLANs, virtualization, vulnerability assessment, and technical documentation. CompTIA A+, Network+, and Security+ certified.

TECHNICAL SKILLS

IT Support: Windows 10/11, Linux, hardware and software troubleshooting, Microsoft 365, printers, Remote Desktop, asset management

Systems: Active Directory, user and permission management, Group Policy, MFA, server maintenance, backups, VirtualBox, VMware

Networking: TCP/IP, DNS, DHCP, VPN, VLANs, 802.1Q trunking, pfSense, TP-Link Omada, Wi-Fi, firewall rules, NAT

Security: Nmap, Wireshark, Nessus, OpenVAS, Suricata, pfBlockerNG, vulnerability assessment, system hardening, incident response fundamentals

Additional: Python and Bash fundamentals, NIST Cybersecurity Framework, CIS Controls, Zero Trust, ISO 27001 concepts

PROFESSIONAL EXPERIENCE

IT Support Specialist | *Catholic Medical Mission Board, Haiti* **May 2021 - Jun 2022**

- Supported a USAID-funded healthcare project across 20+ hospitals and healthcare centers, resolving Windows, application, printer, account, and connectivity incidents onsite and remotely.
- Deployed and maintained routers, switches, wireless access points, and VoIP services; troubleshot TCP/IP, DHCP, DNS, and network availability issues.
- Administered Active Directory users, permissions, and group policies while supporting secure access and day-to-day account operations.
- Performed server maintenance, software updates, backups, endpoint troubleshooting, and equipment replacement to improve service reliability.
- Maintained asset inventory and technical documentation, coordinated equipment procurement, and delivered security-awareness guidance to staff.

SELECTED PROJECTS

Physical Network Infrastructure | *Enterprise-Style Home Lab* **2026**

- Planned and assembled a multi-gig home-lab platform using a four-port Intel N100 pfSense appliance, TP-Link Omada managed switching, an OC200 controller, and two EAP650 Wi-Fi 6 access points.
- Integrated a UGREEN DXP4800 Plus NAS, two Reolink Duo 3 PoE cameras, wireless printing, rack-mounted UPS and PDU protection, structured cabling, and link validation.

SELECTED PROJECTS CONTINUED

Network Segmentation and Security | *Enterprise-Style Home Lab* 2026

- Designed six purpose-built VLANs for HOME, LAB, CAMERAS, NAS, MGMT, and GUEST networks using pfSense routing, Kea DHCP, and Omada 802.1Q trunks and access-port profiles.
- Implemented least-privilege firewall policies, service aliases, camera-to-NAS recording access, guest isolation, trusted-user access, and centralized management controls.
- Troubleshoot DHCP leases, PVID and trunk mismatches, VLAN 1 dependencies, controller adoption, and inter-VLAN access using logs, connectivity tests, and packet analysis.
- Evaluated Suricata and pfBlockerNG controls while balancing security visibility with network availability.

External Penetration Testing Capstone | *Artemis Inc. Simulated Environment* 2024 - 2025

- Performed OSINT, target identification, port scanning, service enumeration, vulnerability analysis, and risk prioritization using a structured penetration-testing methodology.
- Analyzed exposed services, outdated software, and access-control weaknesses, then produced an executive summary and technical report with remediation guidance.

Multi-OS Virtualization Lab | *Oracle VirtualBox*

- Built Windows, Ubuntu, Red Hat, and Kali Linux virtual machines with NAT, bridged, and isolated internal networks for administration and security testing.
- Practiced Linux administration, network troubleshooting, and controlled cybersecurity experimentation without affecting production devices.

High-Performance Workstation | *Hardware Deployment*

- Planned, assembled, and validated a custom Intel-based workstation for software development, virtualization, and cybersecurity lab workloads.
- Verified component compatibility, BIOS and UEFI settings, storage, cooling, operating-system installation, stability, and thermal performance.

Cybersecurity Analysis Portfolio | *GitHub and bonnexandrealexis.com*

- Documented applied analyses covering Zero Trust architecture, CIS Controls v8, system hardening, OWASP Top 10 risks, authentication weaknesses, cryptographic failures, incident response, and security ethics.

EDUCATION

Cybersecurity Training and Certificate | *University of South Florida* 2024 - 2025

Completed 55 labs, 30 mini-projects, and an external penetration-testing capstone.

Bachelor of Science in Computer Science | *École Supérieure d'Infotronique d'Haïti* 2013 - 2017

CERTIFICATIONS

CompTIA Security+ | CompTIA Network+ | CompTIA A+ | Google IT Support Professional Certificate
